

Venture capital to enable new opportunities and growth in Europe

Salla Franzén, Investment manager

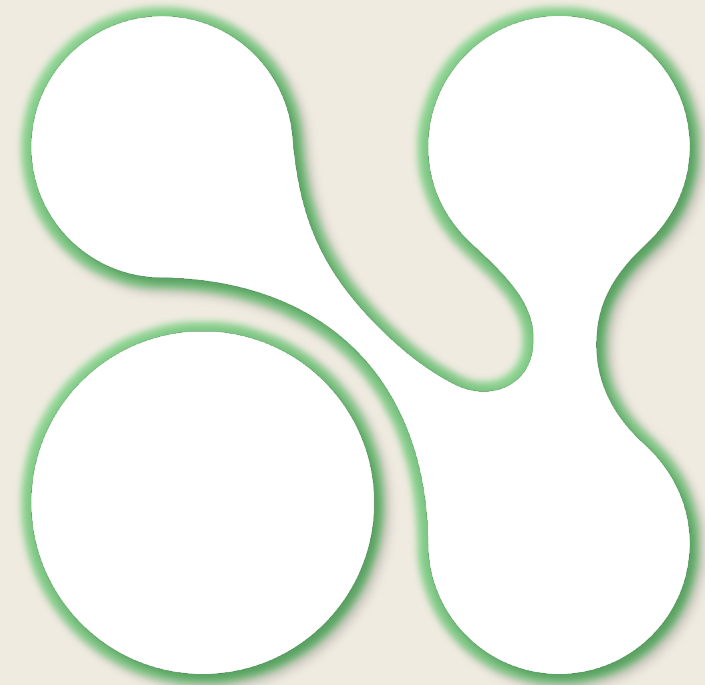

About us

"Navigare is a leading investor specialized in early-stage, science-based ventures.

Through our tight connection with top research, we invest at the scientific and technological frontier.

With our investments, we strengthen the industrial and societal impact of research as well as the long-term funding capacity of the Wallenberg Foundations."

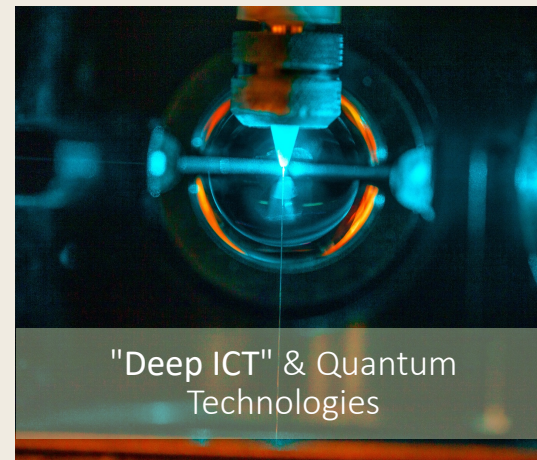

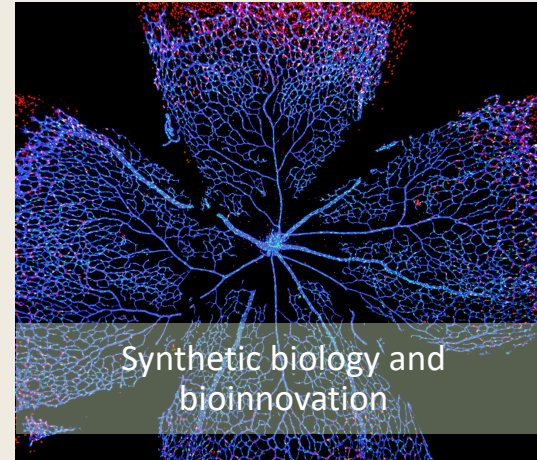

We have four main investment themes...

Industries today are **disrupted** by multiple forces:

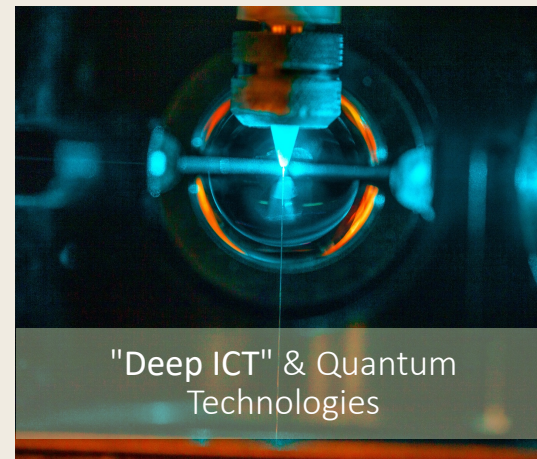

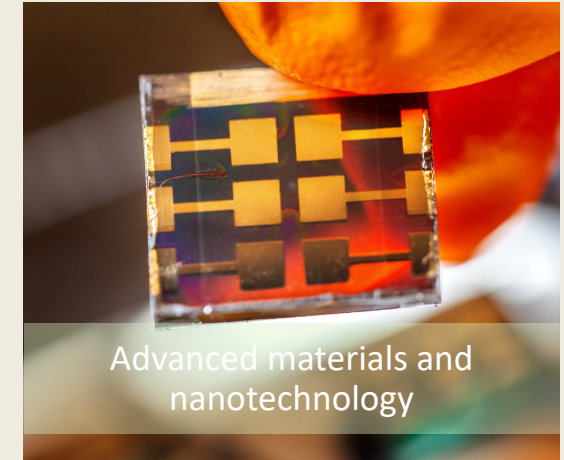

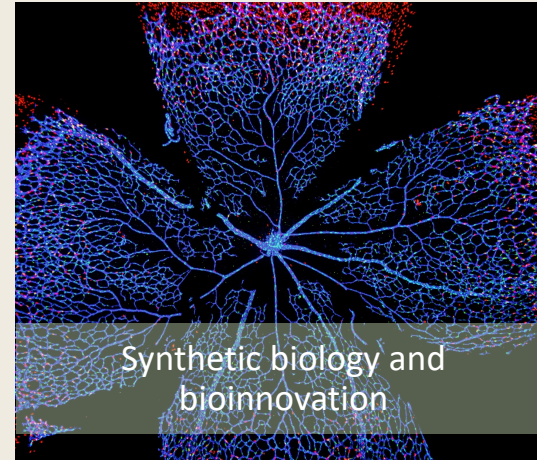

- End-of-life of a number of 20th century technological paradigms.
- New technologies emerge in interdisciplinary research, the term “deep tech” captures this convergence.
- Different new technology options, waiting for a dominant design in many areas.
- Pressure from sustainability and automation accelerates transformation of industries.

Common needs in research-based start ups

- Cyber secure solutions
- Compute power
- Finding key people at an early stage
- Strategic roadmap aligned with client needs
- Networking
- Financing
- Research grants

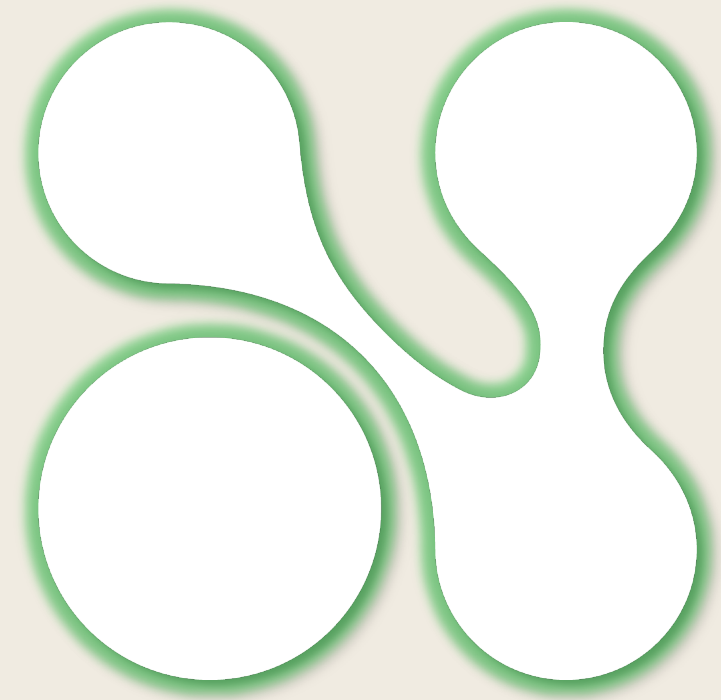

Summary

We are building a new type of investment entity with a dual business/societal mission.

We form a dedicated team with a unique mix of skills and experiences.

The Deep Tech niche is challenging, we have three decisive advantages:

- Close links to the scientific community and the research frontier.
- Close connection to industry.
- We invest through an evergreen structure without time constraints and have a long-term committed owner.

Thank you
